

HYPACK® Multibeam Certification Exam Module

By Cali DeCastro

The HYPACK® Multibeam Certification Exam Module is now available!

About HYPACK® Certification Modules:

- You must first obtain a HYPACK® General Certification. If you have not yet earned this certification, you can access the exam here: [HYPACK® Certification Exam - General](#)
- Once you have passed the general exam, you are eligible to take the Multibeam Module (and other modules as they become available). You can access the exam here: [HYPACK® Certification Exam - Multibeam Module](#)

The following information applies to all HYPACK® Certification Exams:

- Take at your convenience. The exams are open-book and you have an unlimited number of attempts, but please don't share your answers with (or accept help from) others.
- If you obtain a passing score of 80% or higher, you will be awarded a certificate for the respective exam.
- Certifications are considered valid for 3 years from the date you pass the exam, at which point you'll need to renew your certification(s). A lot of changes can happen in the software in 3 years!
- For study material, we recommend consulting the most recent HYPACK User Manual, the [HYPACK Support YouTube Channel](#), and the software itself (many of the answers may be in front of you!)
- Be aware that the exams are designed to evaluate your basic understanding of surveying and your ability to navigate the software and utilize the resources available to you, as opposed to expecting you to memorize information or know the features of the software by heart.

If you have feedback on the exams or have any issues accessing or completing them, please email training@hypack.com.

Best of luck!
