

HYPACK Training Event Case Studies - Back by Popular Demand!

By Cali DeCastro

HYPACK 2025 CASE STUDY SIGN-UP

After receiving lots of positive feedback on case studies presented at the HYPACK 2024 Training Event, we will again be allotting several sessions for HYPACK® users to present unique or interesting in-field use cases featuring HYPACK®, HYSWEEP®, DREDGEPACK®, and other HYPACK software packages at the HYPACK 2025 Training Event!

Last year's case studies featured discussions about fluid mud, arctic surveying, and multi-sensor geophysical data collection, to name a few. So far, the upcoming 2025 event has some great sessions in store, and we still have one opening available!

If you've had at least one moment in the last year where you thought, "Wow, I'm getting paid to do this?!", you might be a great fit for the remaining slot!

If you'd like to show off what you've been working on, please fill out the [HYPACK 2025 Case Study Sign-up Sheet](#) and send it to training@hypack.com. We will notify you as soon as possible if you archosen to present a case study!

STUDENT PRESENTATIONS: NEW FOR THE HYPACK 2025 TRAINING EVENT!

In addition to case studies presented by industry professionals, there are also opportunities for student presentations at HYPACK 2025. If your field of study involves hydrography or any related discipline and you're interested in presenting at the event, please reach out to training@hypack.com for further information!
