

Carefree Pumping

A FIXED-FEE WASTEWATER PUMPING SOLUTION SERVICE WITH FLYGT

Benefits of Xylem Carefree Pumping:

- 24/7 remote asset monitoring to ensure peak-efficiency operation
 - Up to 70% energy saving and 50% reduced footprint
 - Levelized and predictable costs while reducing operational risks
-

Wastewater installation can be a complicated and difficult process to manage

Whether you own or operate commercial buildings, govern a municipality with problematic pump stations, or manage a small industrial enterprise lacking wastewater as a core process, you require manpower and specialized skills to minimize operational risk. To address these challenges, Xylem offers Carefree Pumping, a fit-and-forget service that handles all your wastewater removal needs.

Xylem's Carefree Pumping offering*

Corrective on-site maintenance

Rapid on-site intervention with skilled service technicians in case of unforeseen operational issues

Asset location tracking

Real-time condition monitoring and connectivity to and geotagging of assets

Rental pumps

Wide-ranging rental assets including specialized pumps and accessories mobilized rapidly in case of unforeseen asset failures

No CAPEX

Levelized and predictable costs while transferring the operational risks to Xylem

Inventory reduction

Inventory reduction up to 100%

24/7 site supervision

Real-time site supervision to track asset operating condition and plan emergency recovery actions

Project management

End-to-end, including civil works and subcontractor management

Periodic asset performance reports

Customized reports with detailed operational trends and key events

Preventive maintenance

Optimized, tied to the actual usage or condition of the asset, and enabled by telemetry and remote connectivity

Major pump overhauls

Periodic inspection and replacement of key wear components like bearings and mechanical seals

Installation and commissioning

Inspection, commissioning, and startup, including calibration of pumps, verification of accessories, and configuration of the control equipment

Advanced Flygt pump range with built-in intelligence for optimized, clog-free operations (Concertor or N-pump Series)

* The Carefree Pumping offering could differ based on your location and may be tailored to suit your needs. Please reach out to your local Xylem representative for further details.

Seamless pumping. No budget surprises.

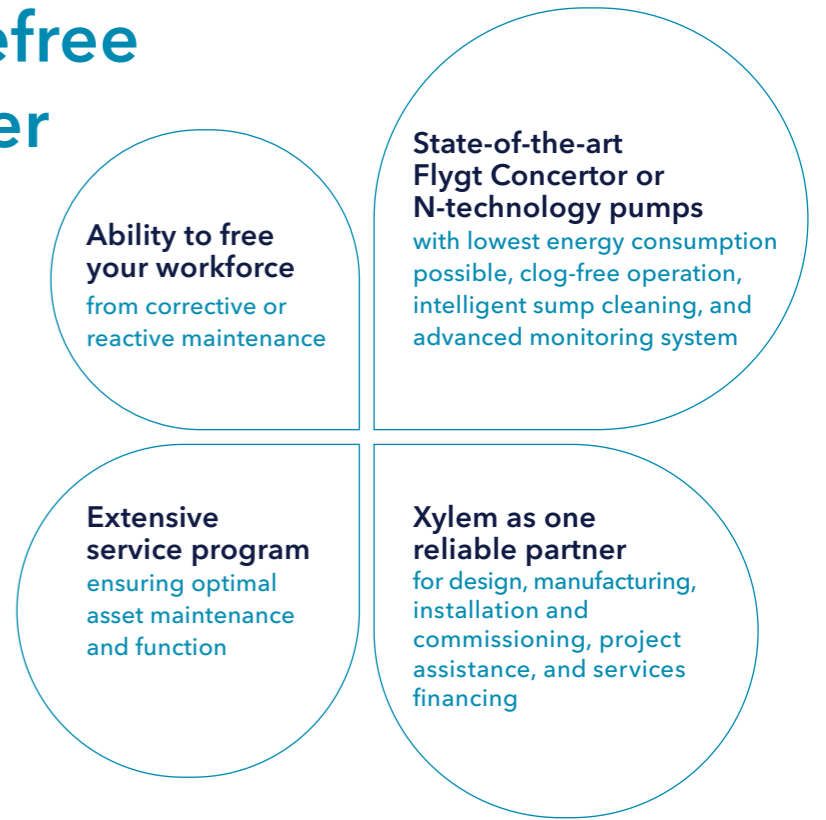

Carefree Pumping is Xylem's pumping-as-a-service offering: a trouble-free wastewater pumping service for a fixed monthly fee, including *lifecycle services* and *asset financing* options.

Enabled by the advanced Flygt pump range – including the Flygt Concertor, a breakthrough pumping system with smart software and the power to eliminate clogs – this offer provides 24/7 remote asset monitoring to ensure peak-efficiency operation.

Pumping-as-a-service ensures engineering expertise

Carefree Pumping transfers operational risk from the customer to Xylem, enabling the customer to focus on their core process – without all the worrying about the needs of their wastewater installations.

How does Carefree Pumping deliver value to you?

Optimize the management of your assets

Carefree Pumping is an important part of our full suite of digital solutions, Xylem Vue, to deliver an asset management service operating customers' assets on their behalf.

Discover how Xylem Vue supports asset managers with our service packages:

Asset Visibility

Tracking your asset 24/7, combining remote connectivity, and monitoring solutions to provide solid and crucial decision intelligence, needed by water and wastewater operators across their network.

Asset Management

Delivering the second stage of digitization for water and wastewater networks, our Asset Management service package is a next-generation remote management and control tool to optimize asset operations and service. Covering a range of solutions, from tailored SCADA systems to pipe network management, leak detection, and pipe assessment services.

Asset Predictability

Our most advanced asset management tool, combined with AI monitoring, delivers reduced asset failure risk across complex water and wastewater networks. The third stage of digitization joins predictive maintenance offerings with Xylem Digital Maintenance. Hence, AquaView-X becomes a natural inclusion in this package.
