

# Ensure Continuous System Operation While Focusing on Team Safety

AVOID SEWER OVERFLOWS WITH STAND-BY CLOG-FREE PUMPS

The current environment puts a lot of stress on your team, workflow and infrastructure. Increased inflow of different material into the sewer can cause problems that force unnecessary operator visits to pump stations.

## **Our Clog Free Concertor® offering reduces the need of visiting pump stations to unclog pumps**

- Integrated pump cleaning function keeps the pump in continuous operation
- Adjustable performance curves makes the selection easier even when the correct flow and head is changing or unknown
- Inventory can be reduced up to 80% compared to conventional pumps – reducing capital expenditures and simplifying spare parts requirements
