

Onsite services

TANKERING SERVICES

ServiceCare Specialist Services

The owners or operators of Sewage Treatment Plants, Oil Interceptors, Cess Pits & Pumping Stations need to occasionally arrange the emptying and disposal of the collected waste material.

What it is

Xylem's Tankering Services provide regulated, cost efficient removal, transportation and disposal to a registered site, of waste liquor from a variety of water/effluent holding & storage locations.

How it works

Xylem Water Solutions UK Ltd.'s Tanker brokerage services provide registered waste carrier facilities with trained and qualified personnel and a modern fleet of tankers to suck out waste liquor from sumps and tanks, transport the waste liquor to a registered disposal site and dispose of the material in an efficient and responsible manner. The entire transaction includes a complete waste transfer record.

Why it makes sense

The disposal of any waste material which is unpleasant or controlled carries a responsibility for the site owner/operator to ensure that the waste is handled correctly and disposed of and treated properly. Xylem's Tanker brokerage is suitably registered and assessed to provide a record of the transactions from removal through to registered disposal and eliminates any questions concerning the responsible disposal.

Why Xylem ServiceCare

Xylem's Tankering solution is available on a planned, or ad hoc basis. Xylem's overall services to Water Users fulfil the need to empty & dispose of waste from Oil Interceptors, Cess Pits, Sewage Treatment Plants and Pumping Stations and the transaction can be managed and recording through a single reliable process by Xylem. The ServiceCare Contract ensures such events are handled on a planned basis at competitive cost.

- All work is undertaken to established and audited standards against ISO 9001 & 14001 (Management Systems) and ISO 18001 (Occupational Health & Safety Management Systems)
- CHAS (Contractors Health & Safety Assessment Scheme) accredited
- CQMS Safety Scheme registered
- EXOR certified supplier
- Safety Management Advisory Service certified contractor
- Registered waste carrier

Case Study

A Client is provided with an ad-hoc cess pit emptying service. The Cess Pit is heavily sludged and the Xylem Service removes and records the volume and nature of removed waste.

Xylem issues a Waste Transfer Note for the collected volume to the Client and then proceeds to a registered disposal site. On Disposal, a further Waste Transfer Note is issued for the disposed volume.

The Client has a complete and reliable record of what volumes were collected and disposed through registered facilities and avoids any investigations into the potential 'fly tipping' of waste material.

Price

You pay for a visit and the removal and disposal of up to 1000 gallons as a fixed charge. In the event that the volumes exceed 1000 gallons then additional charges for disposal will apply.
